Limit of ABFEs

#### Notes:

<sup>1</sup> Range estimated from surveyed, surge-only HWMs. Local wave effects (wave heights and wave runup) are not included in these elevations.

<sup>2</sup> Measured in feet relative to the North American Vertical Datum of 1988

<sup>3</sup> Post-Hurricane Katrina Advisory Base Flood Elevations (ABFEs) are based on updated statistical information to develop the estimated 1%-annual-chance (100-year) stillwater elevations (SWELs) plus estimated wave effects. For Jackson County, MS, the advisory SWEL is 14 ft for the Gulf Coast and 12 ft for back-bay areas. See equation below to calculate the ABFE with wave effects for a given site:

ABFE = Advisory SWEL + Wave Height,

where Wave Height =  $\frac{1}{2}$  Stillwater Flooding Depth (depth measured relative to the ground)
